If $h^2 - ab$ is negative the lines are not real. Note that these results will hold for any two straight lines whose joint equation is of the form $ax^2 + 2hxy + by^2 + px + qy + r = 0$, since the directions of the lines are determined by the terms of the second degree in the joint equation (see 58). (ii) If $y = x \tan 6$ bisects the angle between $ax^2 + 2hxy + by^2 = 0$, $6 = \frac{1}{2}(\alpha + \beta)$, or $(u + y^3) \dots$
