A Veey curious example of this family is found in the Thorny Oyster, a species that is remarkable for the singularly long projections from the shell. The object of these spines is rather obscure, but is said to answer a double purpose, the one being to act as a chevaux-de-frise, whereby the attacks of marauding fish or other foes may be repelled, and the other to aid in fixing the animal to the spot on which it has established itself Any fish, however, that would be strong-jawed enough to crush the shell, even without the spikes, would care no more for them than does a donkey for the prickles of a thistle; and the smaller and more insidious enemies would receive no check from the hedgehoglike array of bristling points. The animal of the Thorny Oyster is eatable, and in many places is looked upon as a delicacy. The last example of this family is the Hinnites, a shell remarkable for its exceeding variability of form. When young, it wanders freely through the ocean; but when it finally settles down in life, it acts like weak-minded men, and moulds itself to the locality in which it happens to reside. If its gets among scoriae, as is not unfrequently the case, the shell follows all the irregularities of its resting-place; and in one instance, where one of these shells had settled upon a group of serpulse, it had accumulated itself to them...
