By experiment. By experiment. By experiment. (228) 9fx = k f 1 Smg CS---/o The unit of current is called the electro-magnetic unit of current if the unit of length is the centimeter, the unit of intensity is the electro-magnetic unit of intensity, and the constant, k, is equal to one. . In electromagnetic units: (229) dfx=-f sin cos Vx.dl An illustration of unit current, in the electro-magnetic system, is such a current that, in unit arc of unit circle it produces unit field at the center. The practical unit of current is called the ampere and is defined as one tenth of the electro-magnetic unit of current. One ampere = (10) 1 e.m.u. of current. or (Number of amperes) (IO) 1 = (Number of e.m.u. of the same current). Equations similar to (229) can be written for components along the other axes. See appendix on International Units. Thus the resultant field at any point for any conductor may be completely determined in magnitude and direction. Usually the X axis may be taken in the direction of the resultant field so that equation (229) is sufficient. Field at the Center of a Circular Conductor.--Let ABC, Fig. 42, be a, circular conductor of radius...
